

from waste to value

binc

A bin that will never go to waste

A dream has come true for Returnity and Lune. By joining forces, we are able to create the ultimate circular waste bin. We take great care in selecting raw materials that make for a sustainable waste bin. These materials come from our own Returnity and Lune networks, and can be infinitely re-used. We are now proud to present the final result of our collaboration: the Binc.

Returnity works towards a world without waste and helps future-conscious businesses operate sustainably. With services and circular products such as lease printing paper, Returnity helps us on our way to a circular environment.

Lune designs, produces and markets products customers can use to collect materials sustainably. Functionality, ergonomics and sustainable design are primary objectives. A special focus on Dutch design makes future-proof products that also look timeless.

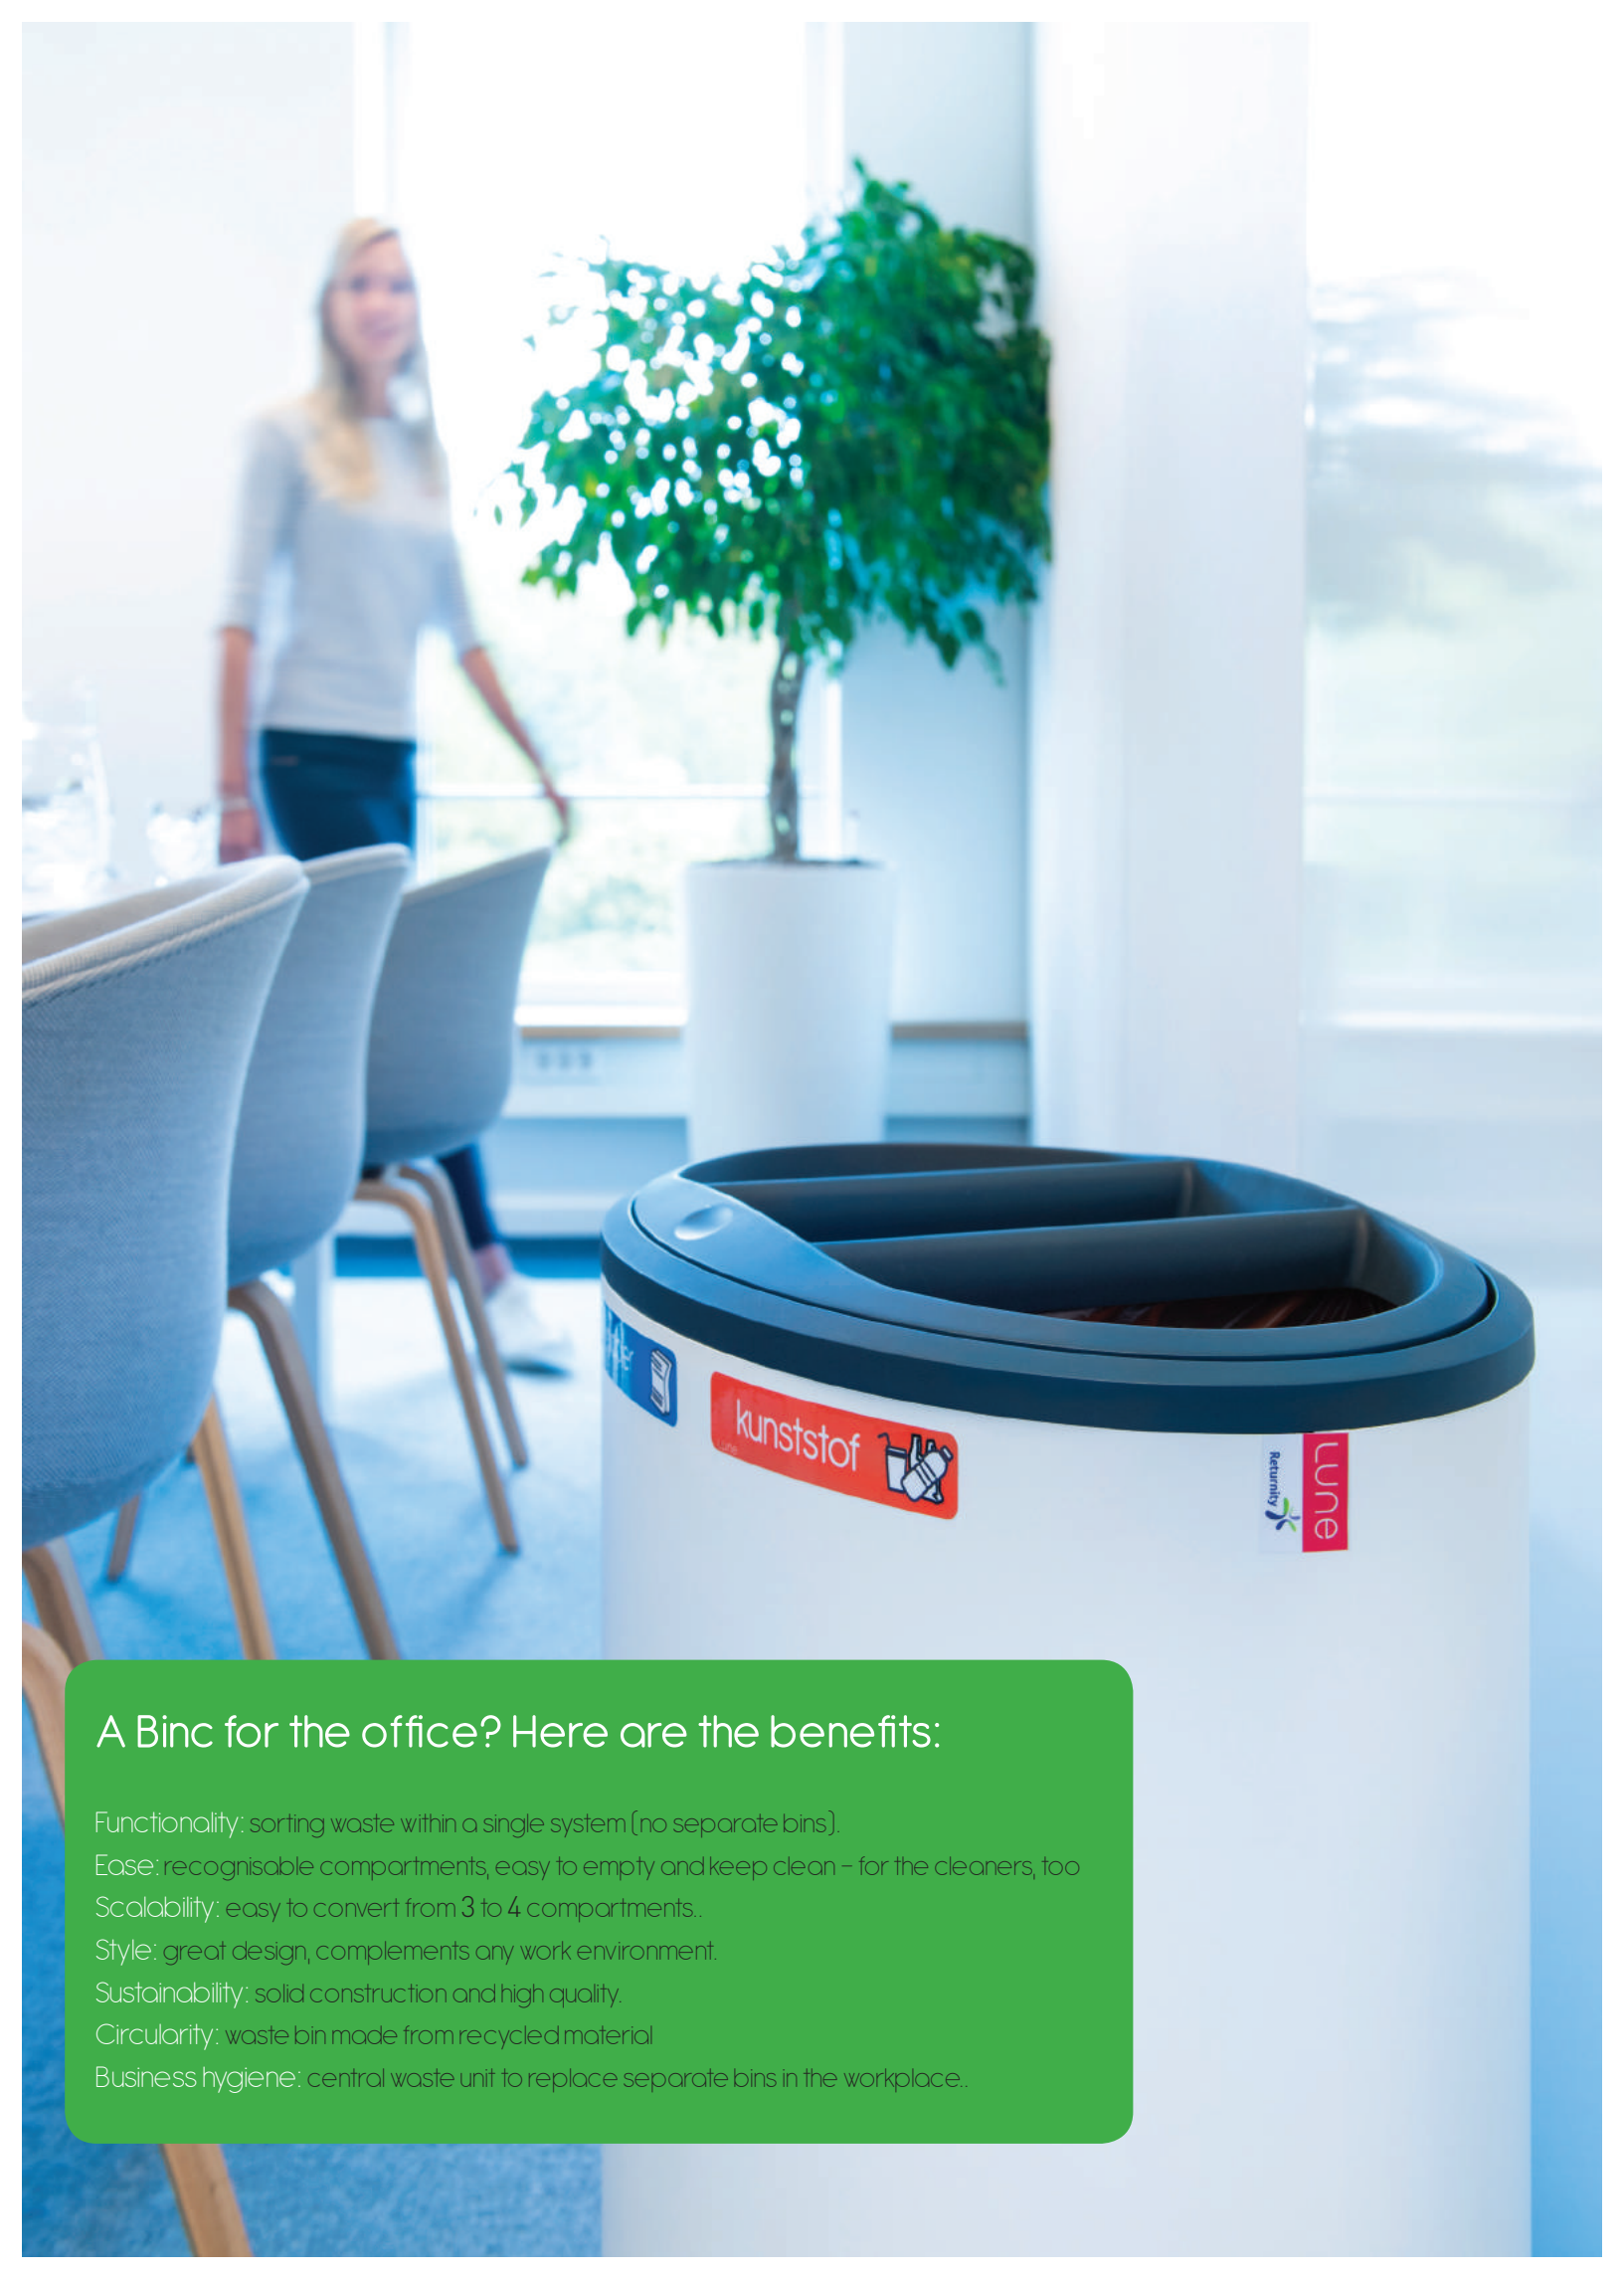

Binc – there's something in it

When choosing a waste bin for your office environment, what do you look for? Do you choose by design? Ease of use? Functionality, perhaps? It can be a difficult choice. That being said, with the unique Binc concept you can have it all – and more!

The Binc is definitely functional: the waste is sorted in a single system which can easily be converted from 3 to 4 compartments, a useful feature if you ever need to add an additional waste stream. Furthermore, you can choose between an open top and a closed lid. A wonderful example of Dutch design, the Binc adds a touch of style to any work environment. And, the Binc is synonymous with ease; the fitted bags for each waste stream, made from recycled plastics, are instantly recognisable by their colour and can quickly and conveniently click into the bin through clever openings. The bags are easy to change and keep clean. Your office cleaners will be delighted.

Though, it is the built-in circularity that really sets the Binc apart from other systems. This elevates the Binc from being just any modern bin to the must-have sustainable solution for sorting waste at work!

A Binc for the office? Here are the benefits:

Functionality: sorting waste within a single system (no separate bins).

Ease: recognisable compartments, easy to empty and keep clean – for the cleaners, too

Scalability: easy to convert from 3 to 4 compartments..

Style: great design, complements any work environment.

Sustainability: solid construction and high quality.

Circularity: waste bin made from recycled material

Business hygiene: central waste unit to replace separate bins in the workplace..

THE CIRCULARITY PRINCIPLE

In a Binc, waste is neatly sorted into various waste streams, including plastics. Returnity processes this plastic into granulate, which is then made into plastic parts for the Binc. As such, we can guarantee the provenance and sustainable processing behind a Binc. We consider waste a valuable raw material for new products and simply give waste a second life, making it circular.

CIRCULAR IN EVERY ASPECT

But Binc circularity goes even further, as even a Binc – or parts of one – need replacing somewhere along the line. When that time comes, we simply take the Binc back to its original place of manufacture in Hoogeveen. There, we will assess which Binc parts need replacing. These may be plastic parts, made from our own Returnity granulate, or metal parts, made from recycled steel from the Netherlands.

In addition, our circular workshop is designed for repairing and refurbishing parts. Why make new, if you can make the old good again? Lastly, we put all the parts – new and used – together. And thus, a Binc begins a whole new life.

The Binc manufacturer and partners think circular to remain future-proof. From modular design to collection. We strive to re-use our products, parts, raw materials and even some waste streams as much as possible, and where necessary, in other products. This way, we transform waste into value.

A CLEAN FEELING

The Binc is beautiful, convenient, functional and circular. These qualities make it the ultimate solution for sustainable waste sorting. Are you ready for this new waste experience? Take your first step in the right direction with the Binc. The environment will thank you for it.

Specifications

Dimensions: 56 cm x 68 cm x 36 cm (b x h x d)

Weight: 11 kg

Capacity: 60L (15 + 30 + 15)

Compartments: 3 standard, easy to convert to 4 with special brackets

Covers: open or lid

Colours: white, black

Labels

Accessories:
bracket set, wheel set, extra labels, coloured bags for each waste stream
